

Colgate Announces Conservation Impacts From "Save Water" Campaign At United Nations Ahead Of Climate Action Summit

September 23, 2019

UN Global Compact Designates Colgate a LEAD Company for Commitment to Sustainable Development Goals

NEW YORK, Sept. 23, 2019 /PRNewswire/ -- Today on United Nations Plaza, Colgate convened leaders in sustainable water use to discuss the cumulative impact that individual action has on water conservation and climate action. This is part of the brand's ongoing public-engagement "Save Water" campaign, launched in 2016.

The panel discussion, titled "#EveryDropCounts: Small Changes Make Big Climate Impacts," featured Vance Merolla, Colgate's worldwide director of sustainability; Mina Guli, an Australia-based ultra-marathoner and water activist; and David B. LaFrance, CEO of the American Water Works Association. Adam Gordon, engagement director for the U.S. network of the UN Global Compact, moderated.

According to estimates by the U.S. Environmental Protection Agency, an individual can save the equivalent of 64 glasses of clean drinking water by turning off the tap while brushing[i] for two minutes.

In addition to water savings, behavior change around water use helps reduce greenhouse gas emissions[ii]. Water and wastewater treatment systems are energy-intensive, so every drop of water saved means less energy used. Current estimates find that since its launch in 2016, Colgate's "Save Water" awareness effort has led to 99 billion gallons of water saved and 5.5 million metric tons of greenhouse gas emissions avoided globally, proving that individual actions lead to massive impacts.[iii]

Today, Colgate also was recognized as a LEAD company by the UN Global Compact, the world's largest corporate sustainability initiative. The designation is given to companies that represent the highest level of engagement with the UN Global Compact, showing a commitment to implementing its Ten Principles and making progress toward the Sustainable Development Goals.

"All of us at Colgate are honored to be on the grounds of the UN today to bring awareness to water conservation and what we're doing to preserve our resources," says Vance Merolla, Colgate's worldwide director of sustainability. "Large-scale efforts of companies like Colgate, together with the daily habit changes of individuals at home, such as turning off the tap when brushing, add up to global change. When we join together with partners like Mina Guli and the American Water Works Association, there's no doubt that we will create positive outcomes for communities."

Leveraging its position as the world's only brand chosen by more than half of the global population^[iv], Colgate will continue its efforts with support of the national day of action "Imagine a Day Without Water" on October twenty-third. Colgate has partnered with the American Water Works Association and the Value of Water Campaign to encourage people across the country to imagine just one day without this vital resource to further behavior change.

The graphic features a red background with a white faucet at the top. A large blue water droplet is falling from the faucet. Inside the droplet is a white piggy bank icon surrounded by small white squiggly lines representing water. The Colgate logo is in the top left corner. Below the droplet, white text reads: "The average family of four CAN SAVE ABOUT 13% OFF THEIR ANNUAL WATER BILL just by turning off the faucet every time they brush their teeth." At the bottom left, in small white text, it says "Source: American Water Works Association rate survey 2019".
